SUMMARY

Have dual expertise in computer vision and network protocol. My fearless embracing of challenges motivates me to follow up on new-edge techniques from time to time. I keep doing the three actions—plan, conduct, and review—to ensure I go toward the goal properly.

PROFESSIONAL EXPERIENCE

Mar 2022 - present
Software Engineer, Arcadyan Technology Corporation, Hsinchu, R.O.C
Router (Embedded Linux)

- IPTV for DT(Germany ISP)
  Modifying kernel/bridge module and userspace/mcproxy for customer IPTV feature request
- MTFW (Manufactory FW) boot time decreasing
  Dropped the unnecessary services on systemD initial mechanism. (120 secs to 45 secs)
- CICD for scheduling FW building
  Design portable CI/CD with gitlab-runner and docker for scheduling FW building.
- Docker environment maintainer
  Support environments with vendors provided proprietary packages/toolchain for debugging and building.
- GDBserver / GDB environment building
  Remote debug process at target machine without burning firmware.

Mar 2020 - Mar 2022 (2 years)
Algorithm Engineer, Gingytech, Hsinchu, R.O.C.
Fingerprint Module (Bare Metal Embedded)

- Fingerprint ISP / Encryption Library
  Implement memory management and encapsulation features.
  Implement a one-time password feature based on the AES-256 algorithm.
- Matching Performance Web-page
  Visualize matching performance with intuitive tables/diagrams on web-page..

Jan 2019 - Jul 2019 (6 months)
R&D Intern, OMRON, Kyoto Japan
Intelligent Factory Application

- Object Detector / Worker Action Classifier
  Improved accuracy of the detector based MASK-RCNN from 80% to 95%.
  Achieved accuracy of the Classifier based decision tree to 85%.

EDUCATION

Sep 2016 – Sep 2019
National Taipei University of Technology (NTUT), Taipei
Master, Computer Science

- Published ICMLC Conference Paper
  An Accelerometer-Based Gait Analysis System to Detect Gait Abnormalities in Cerebrospinal Meningitis Patients
